The term social loafing is used to refer to the phenomenon wherein people make less efforts to achieve the set goal when they work in groups than they make when they work alone.

Social Psychology

Social psychology is the branch of psychology that studies individuals and their relationships with each other, with groups and with the society as a whole.

Social Rhythm Therapy

In this behavioral therapy, the disruptions in circadian rhythms are treated. In this therapy, the biopsychological model of treatment is adapted, instead of using medications only.

Somatization Disorder

It is a disorder in which psychological conflicts present in the mind are expressed unconsciously in the form of physical symptoms which do not have any actual or physical origin behind them.

Somatoform Disorder

Somatoform disorder is a psychiatric disorder characterized by physical symptoms that mimic disease or injury whose physical cause cannot be identified.

Somatotherapy

The treatment of mental illness by physical means, such as medication or psychosurgery, rather than psychotherapy is known as somatotherapy.

Spatial Memory

In cognitive psychology, spatial memory is the part of memory assigned to record information about one's environment and its spatial orientation.

Spatial-temporal Reasoning

It is defined as the ability of visualizing the spatial patterns and manipulating them mentally in a time-ordered sequence of spatial transformations.

Specious Present

The time duration in which one's perceptions are considered to be in the present is known as the specious present.

Speech Perception

The term speech perception refers to the process by which humans are able to interpret various sounds used in language.

Spiritual Psychology

Spiritual psychology or transpersonal psychology is the domain in psychology which deals with the transpersonal or spiritual aspects of the human experience.

Spontaneous Recovery

The reemergence of a conditioned response which had been previously extinguished owing to various factors, including injury.

Sport Psychology

Sport psychology is a domain in psychology which deals in the scientific study of people and their behaviors in the context of sports and the practical application of this knowledge. Read more on [sports psychology](#).

Stimulus

In psychology, the term stimulus is used to refer to anything that effectively impinges upon the sensory system of any living organism.

Stream of Consciousness

The continuous flow of ideas or feelings that facilitate an individual's conscious experience is referred to as stream of consciousness.

Submissiveness

The trait of willingly yielding to the will of another person or a superior force is referred to as submissiveness.

SUDS

SUDS (Subjective Units of Disturbance Scale or a Subjective Units of Distress Scale) is a scale of 10 used to measure the subjective intensity of disturbance experienced by an individual.

Suicide

The act of killing oneself is termed as suicide or self-annihilation. Read more on [teenage suicide](#).

Suicidology

It is a science which deals with the study of suicide. The various disciplines including psychology, physiology, psychiatry and sociology are studied under suicidology.

Superiority Complex

The subconscious neurotic mechanism of compensation developed by the individual owing to extensive feelings of inferiority is referred to as superiority complex.

Superman Complex

The unhealthy belief in an individual that everyone else lacks the capacity to successfully perform any task except oneself is referred to as superman complex.

Syllogism

In psychology, syllogism is the deductive reasoning wherein the conclusion is derived from two premises.

Sylvia Plath Effect

The term Sylvia Plath effect refers to the theory which states that creative writers are more susceptible to mental illness.

Symbolic Violence

Violence including actions having discriminatory or injurious implications, for instance gender dominance or racism, is referred to as symbolic violence.

Syndrome

An association of several clinically recognizable features, signs, symptoms, phenomena or characteristics that occurs together is referred to as syndrome.

Systematic Desensitization

Systematic desensitization is a type of behavioral therapy which helps the subject to effectively overcome various phobias and anxiety disorders.

Systems Psychology

In this branch of applied psychology, the study of human behavior with respect to complex systems is conducted. Systems psychology which is based on the works of Roger Barker, Humberto Maturana and Gregory Bateson is inspired by systems thinking and systems theory.

Systems Intelligence

The human action that connects sensitivity pertaining to systemic environment with systems thinking, thus enhancing a person's problem solving capabilities.

T

Talking Cure

Talking cure or talking therapy is a therapy used in psychiatry to relieve the subject from of the hysterical symptoms referred to as somatoform disorders.

Tarantism

Tarantism is a nervous disorder, characterized by an intense urge to dance, which is most often attributed to bite of the tarantula species of spider.

Telepathy

Telepathy means transfer of information on thoughts or feelings from one mind to another without the use sensory perceptions.

Temperament
